Snap-In Modular WallPlates

Premise Plus™

Cables To Go's flush mount Snap-In WallPlates are designed to insert snap-in modules for different configuration of jacks and connectors for maximum installation flexibility. The Snap-in Modules come in three sizes - 1/2in height, 1in height flat modules and 1-1/2in height 45-degree angled modules for bend radius protection of fiber and copper cabling. A single gang wall plate opening can accommodate three 1in flat modules or two 1-1/2in angled modules.

The modules are a snap to install and remove, giving you a highly adaptable system. The Snap-in Modules can be easily snapped out of the front of the plate, so that changes can be made without removing the plate after installation. Write-on designation labels with clear plastic holders are included for system or station identification.
